

Piketon Area Improvements Project

Baku-Adkins 765 kV Transmission Line

AEP Transmission representatives plan to upgrade the power grid in Pike, Ross and Pickaway counties to connect a new customer to the electric grid and maintain reliable electricity. The project is paid for by the requesting customer. If approved, crews expect to begin construction in fall 2028 and conclude by late 2030.

What

The project* involves building about 56 miles of 765-kilovolt (kV) transmission line between the proposed Baku Station in Pike County and the proposed Adkins Station in Pickaway County.

*This project requires Ohio Power Siting Board (OPSB) Approval

Why

The proposed additions to the power grid:

- Provide power to a data center campus in Piketon, located at the former gaseous diffusion plant.
- Create opportunities for future growth and community development.
- Generate additional tax revenues for local communities.

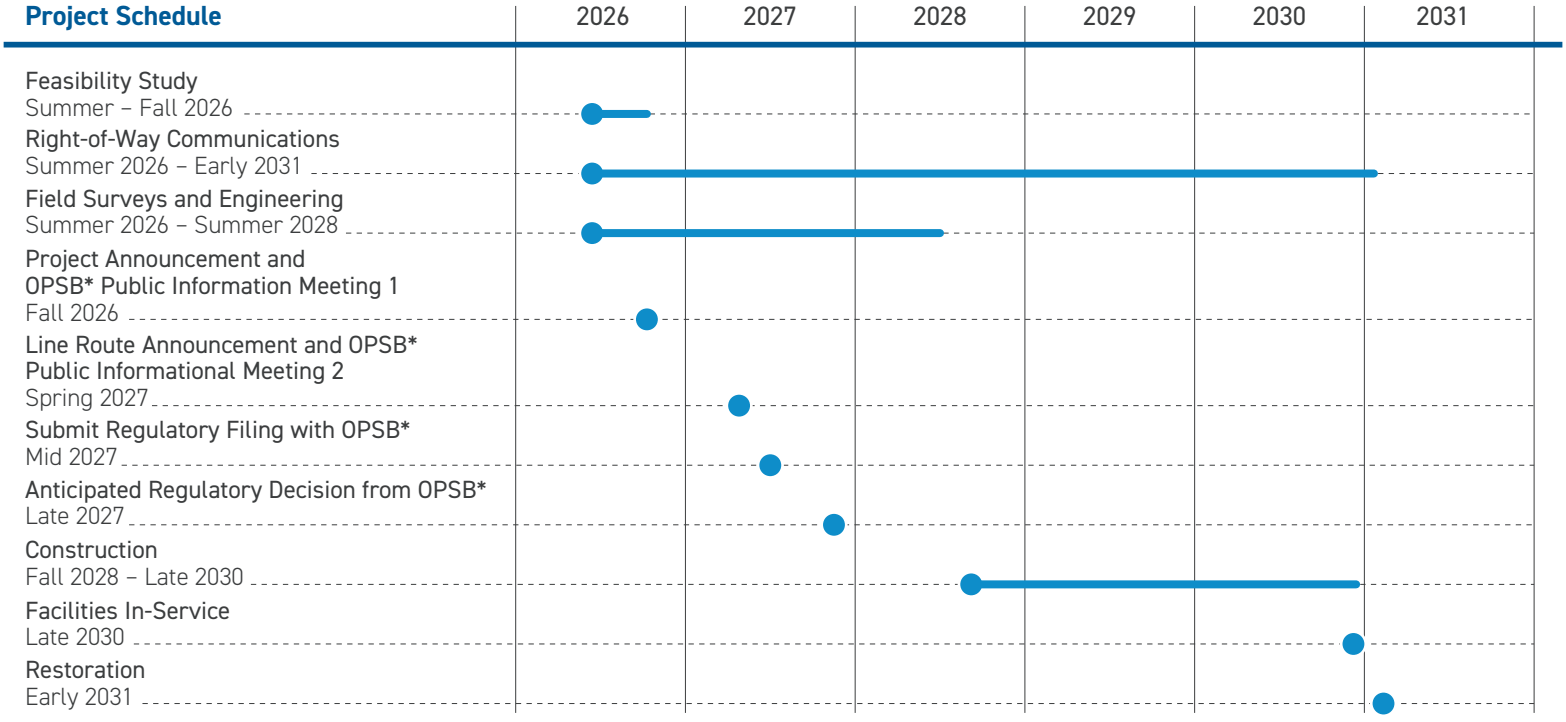

Where

The project area involves:

- Benton, Camp Creek, Newton, Pebble, Scioto and Sunfish townships in Pike County
- Concord, Deerfield, Huntington, Twin and Union townships in Ross County
- Deer Creek, Monroe, and Perry townships in Pickaway County

Company representatives plan to evaluate study segments to construct the transmission line. Study segments include alternatives to determine a final transmission line route. Company representatives do not build all study segments, rather, they select one route based on public feedback and feasibility.

Project Schedule

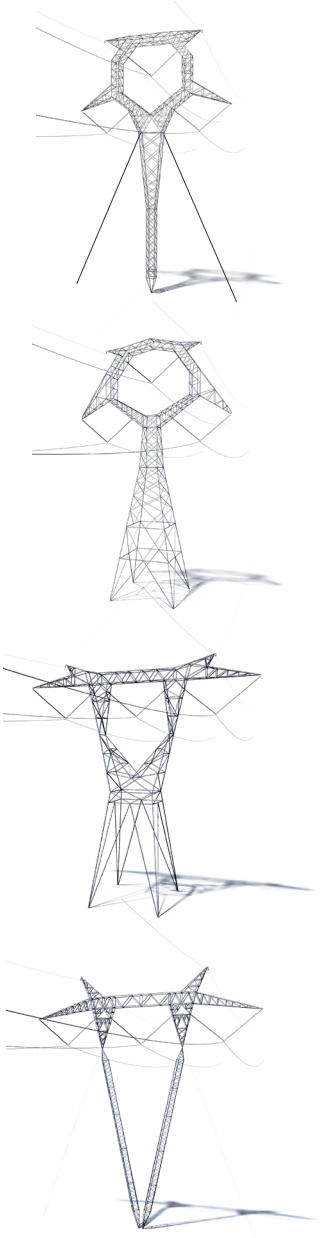

*Ohio Power Siting Board. Timeline subject to change.

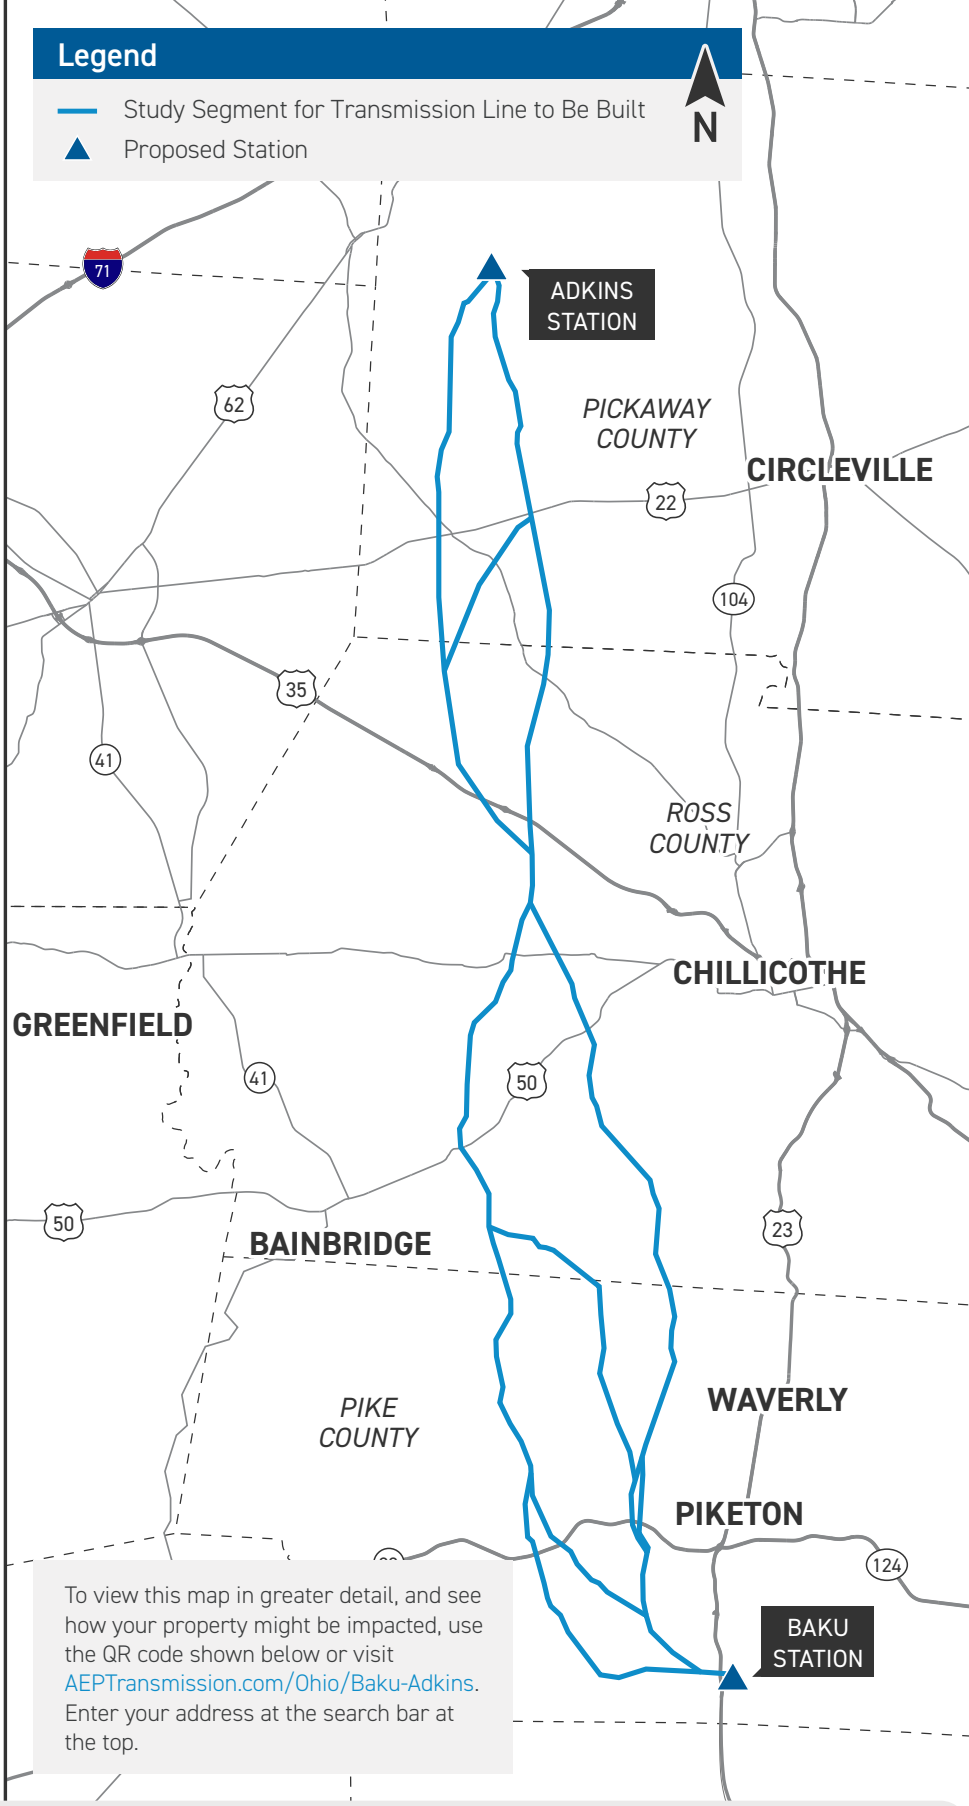

Typical Structures

The project involves the use of steel lattice towers.

Tower Height: 155 - 200 feet*
Right-of-Way Width: 200 feet*
Route Corridor: 100 feet beyond the edge of the right-of-way

**Exact structure types, height and right-of-way requirements may vary.*
