

NORTHEAST HOLMES COUNTY IMPROVEMENTS

An AEP Company

BOUNDLESS ENERGY™

AEP Ohio representatives plan to conduct studies to assess the feasibility of upgrades to the electric transmission network in Holmes County. Company representatives have identified that the area's power grid requires upgrades to increase electric reliability and support increasing electricity demand.

WHAT

Preliminary solutions could include:

- Building new power lines
- Substation upgrades

*If a solution involves building a new power line, the company would not build all study segments; rather, it would select one route to build based on public input and feasibility.

WHY

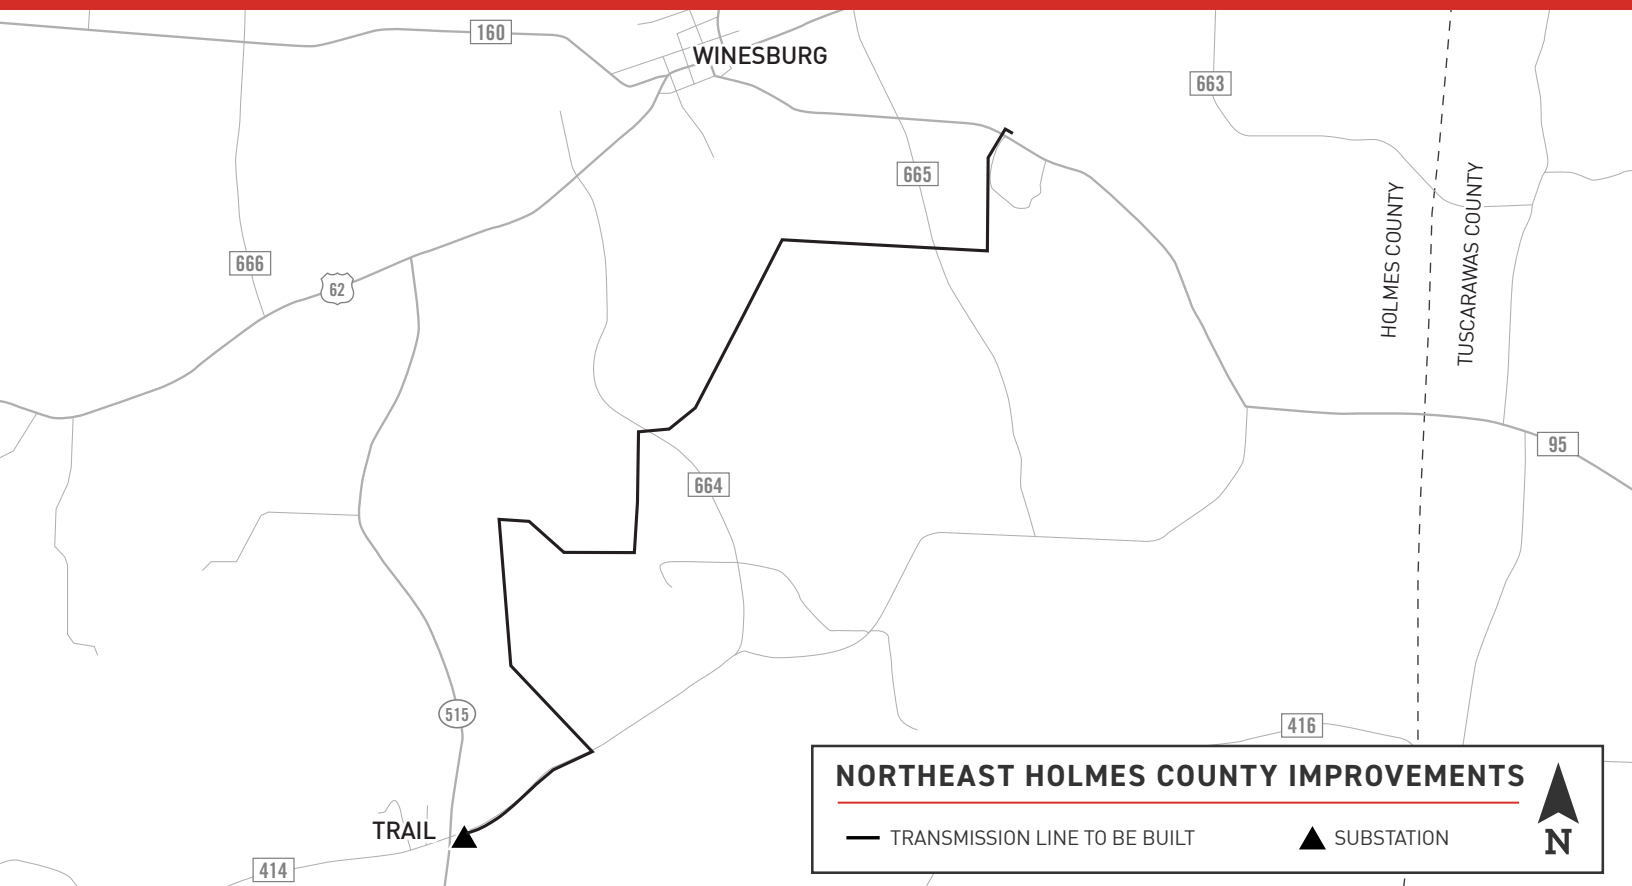

The improvements under consideration would:

- Increase electric reliability
- Support increasing electricity demand

WHERE

The study area includes:

- City of Winesburg
- Holmes County
