

# Haviland – North Delphos Transmission Line Rebuild Project

AEP Ohio is upgrading the electric transmission grid in Paulding and Putnam counties in northwest Ohio. The Haviland – North Delphos Transmission Line Rebuild Project upgrades the existing transmission line to provide a reliable flow of electricity to its customers. The project updates an aging infrastructure to improve its condition and address performance issues.

## WHAT

The project involves rebuilding approximately 17 miles of 138-kilovolt (kV) transmission line connecting the Haviland and the North Delphos substations. Existing lattice structures are being replaced with steel monopoles.

## WHY

Constructed in the 1920s, the infrastructure has reached an age where it needs to be replaced to better serve area customers. Upgrading the line addresses performance issues, improves the line's condition and increases reliability. Improvements also reduce power outages and speed recovery of service when outages do occur.

## WHERE

The transmission line connects the Haviland Substation in Haviland, Ohio to the North Delphos Substation in Ft. Jennings, OH. The line is a section of the longer Lima – Ft. Wayne Transmission Line.

## Typical Structures<sup>\*</sup>

New steel monopole structures will range between 120 to 130 feet in height replacing existing lattice structures. Structures will be placed in the existing right-of-way corridor, where possible.

<sup>\*</sup>Exact structure, height and right-of-way may vary

## Project Schedule<sup>\*</sup>

Project Announcement – Fall 2016  
Surveys – Spring 2017 – Summer 2017  
Engineering – Fall 2016 – Spring 2017  
Right of Way Acquisition – Spring 2017 – Fall 2018  
Construction – Spring 2018 – Winter 2018  
Facilities Placed In Service – Winter 2018  
Restoration – Spring 2019 – Spring 2020

<sup>\*</sup>Project schedule is subject to change. Please visit project website for updates.
